

libella backrest

*Variable and
corrective backrest*

We are a new Czech brand of designer, precisely processed compensation aids. Libella. Balance. On and off the wheelchair.

Libella Backrest is a series of variable, individually adjustable backrests for wheelchairs. They gradually adapt to the user and significantly eliminate the risk of further postural deformities and related health complications. An elegant, thoughtful design with user-friendly functional elements emphasizes high strength, low weight, and breathability. It uses the latest materials and technologies — light aluminium alloys, carbon fibre and 3D printing.

Originality

Individuality

Multiple reconfigurations

Easy handling

Low weight

Libella Backrest Varia consists of two variable and adjustable backrest parts and thus enables support of the torso around the lumbar and thoracic spine and pelvis. It is therefore suitable for people with greater torso instability or with the need for correction in a longer section of the spine.

Libella Backrest Mono consists of one backrest part, so it is more indicated for people who need correction around the lumbar and lower thoracic spine and pelvis. It is suitable for users who have less torso instability and asymmetry, thus requiring correction in a shorter section of the spine.

In a double version of attachment to the wheelchair frame — for a folding frame **1** and a fixed frame **2**.
